MAINTENANCE

## **MAINTENANCE**

In contrast to many construction materials. Wood can be easily maintained, another of its defining characteristics.

Even years after installation, wooden cladding and decking can regain their former beauty, without added investment.

novathermowood decking and cladding are even more durable than traditional wood and highly resistant to bending and swelling. and can be enjoyed for many years to come through good maintenance.

### **novathermowood Decking**

Structural deformation of wood is minimized in novathermowood products. Another factor that contributes to their ease of maintenance. A simple application of oil can reverse years of wear and color fading caused by heavy traffic and UV rays, making novathermowood decking products the right choice.

It should be noted that gray color that develops over time in novathermowood decking does not effect the durability or resistance of the product.

All you have to do to completely renew the look of your decking is to clean it with pressurized water (or sanding). An after allowing it to dry completely (for a minimum of one week) apply the wood preservative in line with manufacturer's instructions.

Oil – based wood preservatives are recommended for the maintenance of novathermowood decking products.

In case of heavy spots, simply sand your decking and make the oiling to have the same look just like the first day.

### **novathermowood Cladding**

Cladding is a dress of a building. As wearing enriches people, a dressed building-house of wood is respected in that way as well. Besides novathermowood cladding products leads for a long lasting healthy life, some other advantages are that its convenient without any maintenance for long years.

In case of maintenance, there is no need to replace the product but a simple care with an economical solution will give the same appearance just like the first day.

After the installation of wooden claddings, the surface treatment is done by water based stains (color stains). According to the stain providers “Technical Data Sheet” the need of maintenance is in between 8-10 years.

novathermowood cladding products are highly appreciated by most of the projects due to its easy maintenance abilities. Healthy, sustainable and providing easy maintenance makes it the top cladding product.
